

STRONG ROTATIONALLY MOLDED SPAS
GO GREEN. GO STRONG.

While the whole world is *thinking green*, Strong continues to be a leader in environmental conservation. Strong Industries has been researching, developing... and patenting... environmentally friendly 'green' technology for years. Strong's focus continues to be on manufacturing the *cleanest, most energy efficient, best performing and longest lasting spas on the market*. And we've done it...

Strong's Rotationally Molded Spas...there are just so many reasons to love them!

Strong Rotationally Molded Spas are clean, tough, energy efficient and easy to install. Just plug into a standard 110 volt household outlet and start enjoying or convert to 220 volts for more efficient operation. Elegant underwater lighting and all-season heating are fully adjustable with the sleek topside Balboa control panel. Strong Spas also feature convenient access to electrical components, pump and pack through the easy-access, lockable door – without draining, lifting and tearing out of foam insulation!

These are the perfect four-season spas for even the harshest climates. Unlike other rotationally molded spas on the market, Strong Spas are equipped with *true water heaters*, not friction heaters. Friction spas or heat exchange spas are fair-weather spas that warm and filter water slowly and ineffectively and must run all day long. *Strong spa heaters are energy efficient and much more effective, heating and filtering your spa better while lowering your operating costs and saving you money.*

Claim to Fame!

Clean, lightweight, energy efficient, portable – most fit through any standard doorframe – and Strong Spas are *virtually indestructible!*

Seriously!

Our baseball bat demonstration tells the story (*seen on YouTube.com*). You can bash it over and over! The bat will break but the Strong Spa can take it... no dents, scratches or cracks – we guarantee it.

The Strong Spas innovative unibody construction, in which the body of the spa is integrated into a single unit with the chassis, rather than having a separate body-on-frame, provides unparalleled structural integrity and comes with the *industry's first Lifetime Warranty!*

This spa is so strong it can be placed on any level and stable surface saving you the high cost of buying and installing a spa pad. Other manufacturers are still using outdated steel and wood frame construction. Steel frame spas, whether powder-coated or galvanized, will rust and bend and the weight of the water will eventually collapse the cabinet. Wood frames will rot, twist, warp and will always grow bacteria and mold. Strong's Rotationally Molded Spa is manufactured using 100% FDA approved*, hypoallergenic resin which *prohibits the growth of bacteria and mold*. The science of Strong not only produces a cleaner spa but the unibody construction prohibits the intrusion of vermin and other unwanted pests.

Superior design, superior technology and all backed with the industry's first Lifetime Warranty.

True All-Season Heater!

Enjoy your spa any time of the year
 with our 1kW/4kW convertible heater!
